FOR DOWNLOADING Virtual Machine
*There are lots of option there but we are using Oracle VM for now*
- Download Oracle Virtual box visit: CLICK HERE FOR ORACLE VIRTUAL BOX
- Finish the setup for Virtual Box
- We can use any ISO for Linux but we are going to use Ubuntu for simplicity.
- For downloading and setting up the Ubuntu in the VM is given below.

**FOR DOWNLOADING and SETTING up Ubuntu in VM**
- Download Ubuntu disk image(ISO) from: CLICK HERE FOR UBUNTU ISO
- It's better to download 24.04 LTS version
- OPEN Oracle VirtualBox then follow given steps:

STEPS:
1. After opening Oracle Virtual Box it must be something given below:

2. Click on New Button on top
3. Then following should pop up:

   – now select ISO image you just downloaded
4. Now go to next step which is Unattended **Install** cick it and add username and password
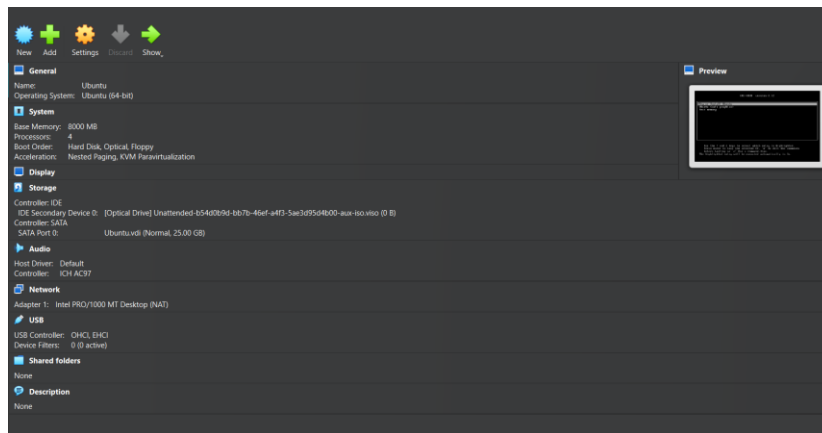

5. Go to **Hardware** section next and provide required specification according to your system

6. Go to Hard **Disk** Section next and provide required space for the Ubuntu system

7. Click **Finish** then following will pop up

8. After completing all these steps your Virtual Machine should be running
9. Complete the setup for Ubuntu in the VM window interface.
